Renewable Energy

Success Story

“We were tired of being at the mercy of the utility companies.”

The Situation

Energy independence was Richard Hartgrove’s goal when he contacted Standard Renewable Energy about renewable energy options. Hartgrove was looking to begin to free himself from dependence on the power grid that leaves many of us at the mercy of ever-fluctuating energy costs.

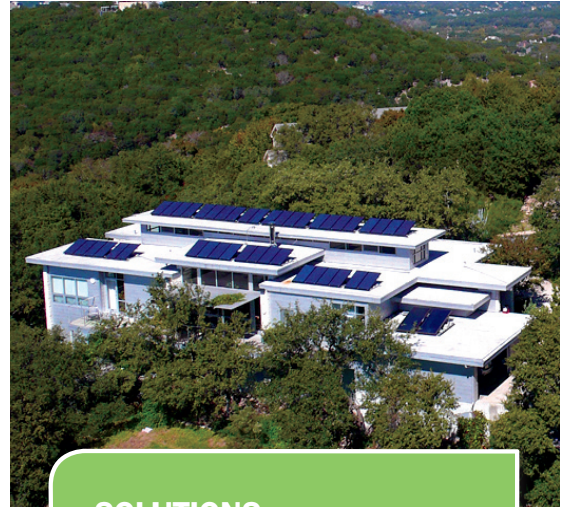

The Decision

After discussing his options with SRE, Hartgrove settled on a solar electric system and a solar water heater. The combination will not only allow him to generate his own electricity, but also save a significant amount of money that would usually be spent on heating water, a traditionally energy-inefficient process that’s responsible for one of the largest portions of a home’s energy costs after heating and air conditioning.

The Results

Hartgrove and his family are also using the my.SRE3.com Monitoring System, which helps them to track their energy usage and solar electricity production. The System allowed the Hartgroves to focus energy intensive tasks during off-peak times or at times when their solar electric production is highest, helping save them even more on their already greatly reduced energy bills.

Hartgrove also predicts the renewable energy improvements he’s made will help his home appreciate in value for years to come.

SOLUTIONS IMPLEMENTED:

Solar Panel System

Solar Water Heating

“I enjoy doing anything to free me by any amount from the power grid.”

“I like the monitoring system very much. Using it allows me . . . to alter my consumption in ways that lower my power bill.”

“I recommend SRE’s products and services to others interested in becoming more green and lowering their power bills.”

“All the SRE employees who have been on the property are professional, seem interested in what they’re doing and inspire confidence in me that my system will be installed correctly.”
